

Domestic Water Usage Calculations

The building regulations includes limits on water use for all new homes and dwellings formed by conversion.

Building control requires water efficiency calculations at design stage where a fittings approach is not followed (where the water fittings do not exceed the values specified in Table 2.1 of Approved Document G for standard usage level or Table 2.2 for the optional usage level). This calculation should show that water usage is limited to either a standard pre-determined level or an optional pre-determined level imposed as part of the process of granting planning permission.

Water usage from WC's, wash basins, sinks, showers, baths and white goods such as dishwashers and washing machines are all included in the calculation.

LABC can provide water usage calculations to support a building regulations application with either a simple performance specification or a more detailed report itemising the make and model of water fittings and appliances.

For a quotation or to discuss your particular requirements please contact us via energy@labc.co.uk, fill in our online quote request form or call 0845 307 3834.
